

WALL MOUNT DESKTOP CPU BRACKET

The Kendall Howard Wall Mount Desktop CPU Bracket is designed to safely store tower computers out of the way by mounting them to the wall or the side of a desk. Desktop computers and PCs that sit on a desk take up valuable workspace, look cluttered and unorganized, and run the risk of being damaged due to soda or coffee spills. But the floor is no place for it either. Computers located on the floor are in continual danger of being jostled and kicked, not to mention the difficulty in accessing the drives, ports, and card readers. By installing this Wall Mount CPU Bracket, you can create a more functional and organized workspace while also better protecting your PC from damage.

FEATURES

Universal Design - The heavy duty welded design provides a dependable mounting solution for most CPUs and tower computers.

Included Velcro Strap - The CPU shelf includes a large Velcro strap that can be fed through slots on the side of the bracket for added support.

Easy to Install - The CPU bracket ships fully assembled. To install, simply secure hardware through the 16" on center mounting holes and it is ready for use.

SPECIFICATIONS
